password

NOTE: Use Spotify API to integrate sign in!

on login Auth.

3.)

This is your Room code:  
#####

If you would like to set a password, please fill it in the field. Else, leave blank & continue.

password: \_\_\_\_\_

continue

NOTE: Do we need a room code or can people join in a "Jam" together as they normally would?

on Continue,

Set password in data base for the room (leave blank if nothing entered)

after, ... Room is created

www.better-spot-jam.com/main\_host (/main-guest will be for guests & slightly different)

User Library

playlist 1  
playlist 2

Queue

song 1  
song 2  
song 3  
song 4  
song 5  
song 6

Current Song

played by

base of #id blocks

NOTE: The numbers to the right correlate to red circled numbers in the graphic to the left

1) Very similar to normal Spotify format. Displays 'Library' of songs & playlists that are saved/created by curr. user.

2) Displays currently playing song, user who played it, and time stamp slider for song. Also contains Pause/play, skip forward and skip backwards buttons that should work as they normally do on Spotify

3) This is standard music platform functionality for searching & finding songs/playlists.

### → CONCERN:

What if a user tries to queue a playlist rather than song?

Solution → prob just add all of the songs to their queue. would be like adding them individually

4) This should show the "Real view" of the queue. Meaning, the actual order based on the fairness queuing should be shown. The users for each queued song are shown on the right of song via either a colored circle or profile pic.

→ Default Playlist songs are either shown as host playing.  
or as "playlist" user.

Default Playlist

Room Code: #####

song 1  
song 2  
song 3  
song 4  
song 5  
song 6

6: On click, you can generate an invite link for other users (should be reusable)

9: The star symbol underneath a user indicates that they are the ones who queued a certain song.

8: On End Jam

Pop up window, should overlay on whatever is underneath.

would you like to save this jam as a playlist?
